Connect Cashfree

Collect course fees by UPI, cards, netbanking and wallets through **your own Cashfree Payments account**. Money settles straight to your bank. Here is everything you need to connect it.

WHAT YOU NEED TO KEEP READY

1 **KYC done, Production on**
Your Cashfree **Payment Gateway** account must be **activated for Production** (real payments).

2 **Production API keys**
App ID + **Secret Key** from Developers → API Keys. The secret is shown **only once**.

3 **Domain whitelisting**
Your **learner portal / website domain** whitelisted in Developers → Whitelisting. Without it, checkout is blocked.

4 **Correct API Base URL**
Production: `https://api.cashfree.com/pg`
Sandbox (testing): `https://sandbox.cashfree.com/pg`

5 **Webhook (automatic)**
We send the webhook URL **with every order**, so nothing is mandatory here. A dashboard webhook is an optional backup.

6 **Paste keys in admin**
Settings → Payment Gateways → Add Gateway → Cashfree. Enter the three values. Done in 2 minutes.

STEP 1	STEP 2	STEP 3	STEP 4
Generate keys	**Whitelist domain**	**Paste in admin**	**₹1 test & go live**

About 15–20 minutes once your account is in Production; domain whitelisting approval can take a little longer, so start it early. Cashfree charges its own fee per transaction and settles directly to your bank.

GO-LIVE CHECKLIST

- [ ] KYC done, Production active
- [ ] Production App ID + Secret Key generated
- [ ] Learner portal (and website) domain whitelisted
- [ ] Cashfree added in admin with `api.cashfree.com/pg`
- [ ] (Optional) dashboard webhook with the full URL
- [ ] Cashfree shows **Active** in admin
- [ ] ₹1 test → Paid + learner enrolled

Step-by-step setup

Part 1 · in your Cashfree dashboard

1 Generate your Production API keys

- Log in to **merchant.cashfree.com**, open **Payment Gateway** and make sure you are in **Production**.
- Open **Developers → API Keys** and click **Generate API Keys**.
- Copy the **App ID** and **Secret Key**. The secret is shown only once, so save it now.

⚠ Test keys (usually start with `TEST`) only work with the Sandbox URL. Production keys only work with the Production URL.

2 Whitelist your domain

- Open **Developers → Whitelisting** (some accounts: **Settings → Domain Whitelisting**).
- Click **Add Domain** and add every domain learners pay from: your **learner portal** (e.g. `learn.yourinstitute.com`) and your **website** if it has a store.
- Submit. Approval can take some time.

3 Webhook: optional backup

- Payment confirmations already reach us automatically. For extra safety, add the same URL in Cashfree:
- Open **Developers → Webhooks → Add Webhook Endpoint** and fill it as below.

Cashfree → Add Webhook Endpoint

Endpoint URL	**Copy URL** from the admin dialog (Settings → Payment Gateways → Add Gateway → Cashfree). Copy the **whole** URL, including `…/webhook/callback/cashfree?instituteId=…`
Events	✓ Payment Success · ✓ Payment Failed · ✓ Payment User Dropped
Version	Latest

HOW A PAYMENT GETS CONFIRMED

If the webhook step fails, the money is still in your account but the learner stays **Pending**. That is why the webhook matters.

Step-by-step setup

Part 2 · admin panel & testing

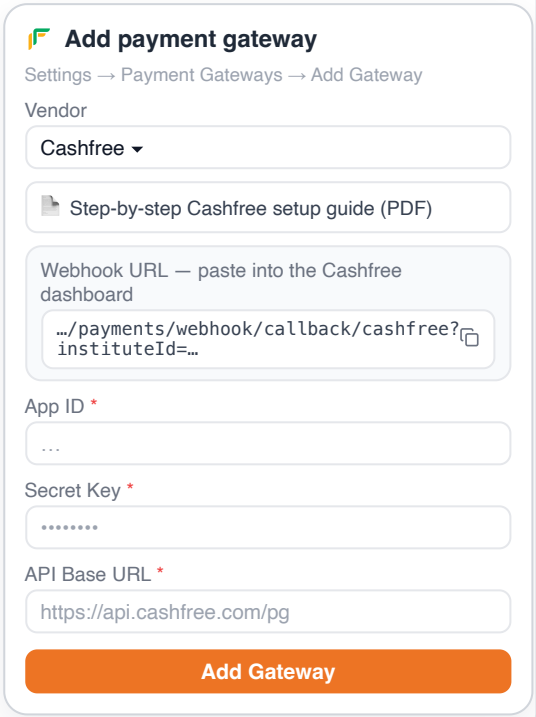

4 Paste in the admin panel

- Open **Settings** → **Payment Gateways** → **Add Gateway** and pick **Cashfree**.
- Fill the fields and click **Add Gateway**. It now shows as **Active**.
- Secrets show masked later (`••••1234`). To rotate, use **Edit credentials**; leaving a masked field untouched keeps the old value.

ADMIN FIELD		WHAT TO PASTE	
App ID	←	App ID	from step 1
Secret Key	←	Secret Key	from step 1
API Base URL	←	Production or Sandbox URL	see the box on the right

KEYS AND URL MUST MATCH

Production keys	→	`https://api.cashfree.com/pg`	Real payments
Test keys (TEST…)	→	`https://sandbox.cashfree.com/pg`	Testing only

5 Test with ₹1 before you announce

- Make a paid invite link (or a course priced ₹1) and open it in an **incognito** window.
- Pay with a real UPI / card. Check: learner lands in the course, payment shows **Paid** in admin, and the gateway dashboard shows it as successful.
- Refund the test payment from the gateway dashboard if you like.

New invite links, payment plans and paid live sessions use this gateway automatically. **Existing** invite links keep the gateway they were created with. Switching from another gateway? Ask support to move them.

IF SOMETHING GOES WRONG

WHAT YOU SEE	WHAT TO DO
Checkout shows **"Broken link"**	Keys and Base URL are from different environments. Production keys ↔ `api.cashfree.com/pg` ; Test keys ↔ `sandbox.cashfree.com/pg` .
"Authentication failed" on paying	Wrong App ID / Secret Key, or the key was regenerated. Copy again → **Edit credentials**.
"Domain not whitelisted"	Add the learner portal domain in **Developers** → **Whitelisting** (step 2).
Learner paid, enrollment still **Pending**	Add the dashboard webhook (step 3) with the full URL, then share the order ID with support to re-check.
Payments stopped after changing keys	Old key still saved in admin. Update it under **Edit credentials**.
