Razorpay

Payment Gateway Setup Guide

Connect Razorpay

Collect course fees by card, UPI, netbanking and wallets through **your own Razorpay account**. Money settles straight to your bank. Here is everything you need to connect it.

WHAT YOU NEED TO KEEP READY

1 **KYC done, Live mode on**
Your Razorpay account must be **activated for live payments**. Test keys cannot take real money.

2 **Live API keys**
Key ID (starts `rzp_live_`) + **Key Secret** from Account & Settings → API Keys. The secret is shown **only once**.

3 **Webhook + Webhook Secret**
Add our webhook URL in Razorpay and **create a secret** for it. Without this, learners pay but stay **Pending**.

4 **Automatic capture**
Payment capture set to **Automatic**. On manual capture, payments stay "authorized" and get refunded.

5 **Approved website**
Your **learner portal / website domain** approved in Razorpay → Website & App settings.

6 **Paste keys in admin**
Settings → Payment Gateways → Add Gateway → Razorpay. Enter the three values. Done in 2 minutes.

STEP 1	STEP 2	STEP 3	STEP 4
Generate live keys	**Add the webhook**	**Paste in admin**	**₹1 test & go live**

About 15–20 minutes once your Razorpay account is live. Razorpay charges its own fee per transaction and settles money directly to your bank account.

GO-LIVE CHECKLIST

- ☐ KYC done, Live mode active
- ☐ Live Key ID + Key Secret generated
- ☐ Webhook added in **Live** mode, URL copied from admin
- ☐ 4 events ticked
- ☐ Same Webhook Secret in Razorpay and admin
- ☐ Payment capture = Automatic
- ☐ Learner portal domain approved
- ☐ Razorpay shows **Active** in admin
- ☐ ₹1 test → Paid + learner enrolled

Step-by-step setup

Part 1 · in your Razorpay dashboard

1 Generate your live API keys

- Log in to **dashboard.razorpay.com** and switch the top toggle to **Live Mode**.
- Open **Account & Settings** → **API Keys** and click **Generate Key** (or **Regenerate**).
- Copy the **Key ID** and **Key Secret** and download the key file. The secret is shown only once.

⚠ Regenerating a key stops the old one immediately. Update it in the admin panel the same minute.

2 Add the webhook (most important step)

- Still in **Live Mode**, open **Account & Settings** → **Webhooks** → **+ Add New Webhook**.
- Fill the form exactly as below and click **Create Webhook**.

Razorpay → Add New Webhook

Webhook URL	**Copy URL** from the admin dialog (Settings → Payment Gateways → Add Gateway → Razorpay). It ends with `…/payments/webhook/callback/razorpay`
Secret	Make up a strong password (20+ letters & numbers). **Note it down**: this is your **Webhook Secret**.
Alert Email	An email your team reads. Razorpay mails here if deliveries fail.
Active Events	✓ `payment.authorized` ✓ `payment.captured` ✓ `payment.failed` ✓ `order.paid`

ⓘ Test Mode and Live Mode keep **separate** webhook lists. Tested in Test Mode first? Add the webhook again in Live Mode.

3 Turn on automatic capture & get your website approved

- **Account & Settings** → **Payment Capture** → choose **Automatic**, with the shortest capture window.
- **Account & Settings** → **Website & App settings** → make sure your learner portal domain is listed and approved.

HOW A PAYMENT GETS CONFIRMED

Learner pays (on your portal) → **Razorpay** (takes the money) → **Webhook** (tells us "paid") → **Marked Paid** (in your admin) → **Learner enrolled** (access opens)

If the webhook step fails, the money is still in your account but the learner stays **Pending**. That is why the webhook matters.

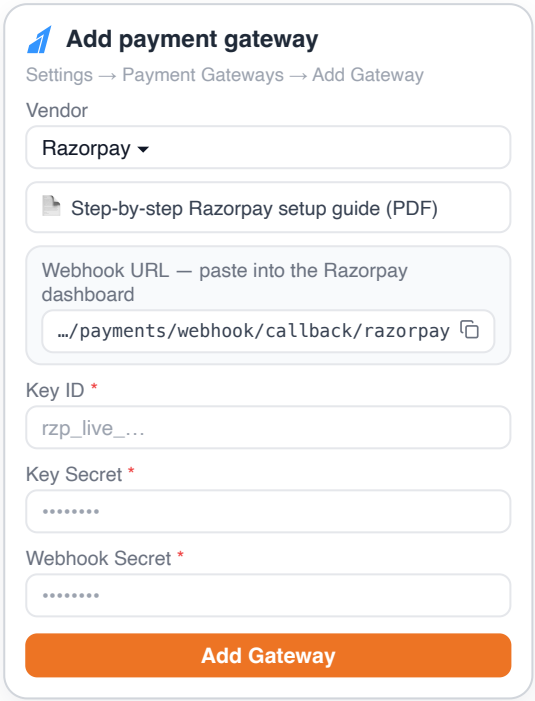

Step-by-step setup

Part 2 · admin panel & testing

4 Paste in the admin panel

- Open **Settings** → **Payment Gateways** → **Add Gateway** and pick **Razorpay**.
- Fill the fields and click **Add Gateway**. It now shows as **Active**.
- Secrets show masked later (`••••1234`). To rotate, use **Edit credentials**; leaving a masked field untouched keeps the old value.

ADMIN FIELD		WHAT TO PASTE	
Key ID	←	Key ID	rzp_live_…
Key Secret	←	Key Secret	from step 1
Webhook Secret	←	Secret you made up in step 2	must match exactly

5 Test with ₹1 before you announce

- Make a paid invite link (or a course priced ₹1) and open it in an **incognito** window.
- Pay with a real UPI / card. Check: learner lands in the course, payment shows **Paid** in admin, and the gateway dashboard shows it as successful.
- Refund the test payment from the gateway dashboard if you like.

ⓘ **New** invite links, payment plans and paid live sessions use this gateway automatically. **Existing** invite links keep the gateway they were created with. Switching from another gateway? Ask support to move them.

IF SOMETHING GOES WRONG

WHAT YOU SEE	WHAT TO DO
Learner paid, enrollment still **Pending**	Webhook missing, wrong events, or Webhook Secret mismatch. Razorpay's webhook log shows **400** (wrong secret) or **404** (no secret saved in admin).
Checkout won't open / "Invalid key"	Test key in Live, or keys copied wrongly. Regenerate live keys → **Edit credentials**.
Payment stuck at "Authorized"	Manual capture is on. Switch to **Automatic** (step 3).
"Website not approved"	Add the learner portal domain in Website & App settings and wait for approval.
Payments stopped after changing keys	Old key still saved in admin. Update it under **Edit credentials**.
